Section 1: Values-Based Principles for Trustworthy AI Systems

The OECD AI Principles foster innovation while ensuring respect for human rights, democratic values, and rule of law.

Principle 1.1 emphasizes inclusive growth, sustainable development, and global economic and environmental well-being.

Principle 1.2 requires AI actors to respect human rights and diversity, embedding fairness and safeguarding against unfair bias.

Principle 1.3 mandates transparency and responsible disclosure to foster general understanding and enable challenge of AI out

Section 2: Robustness, Security, and Accountability Mandates

Principle 1.4 requires AI systems to function in a robust, secure, and safe manner throughout their entire operational life cycles.

AI systems must be designed to withstand adversarial inputs, data manipulation, and cybersecurity vulnerabilities continuously.

Principle 1.5 dictates that AI actors must be held accountable for the proper functioning and ethical impact of AI systems.

National frameworks should encourage risk management approaches that assess social harms prior to public sector deployment.

Section 3: National Policies and International Cooperation Priorities

Governments should facilitate long-term public investment in trustworthy AI research and development to address societal challenges.

Policy makers should foster accessible digital ecosystems and open public data repositories while preserving intellectual property rights.

Member countries agree to support cross-border regulatory sandboxes to test innovative AI applications in safe environments.

International cooperation is vital for developing interoperable technical standards and shared ethical evaluation benchmarks.
